

**HR-01 Black**

**HR-02 Blue**

**HR-03 Red**

**HR-04 Yellow**

*ChromaticFever is a new class of thermochromic pigments, or pigments that change color with changing temperature. These powders can be used to create some really cool color changing effects when used as a color coat or a ground coat for other transparent or semi transparent color coats such as KonFusion(tm) color change basecoats or EyeKandy(tm) Kandy colors. Designed with a mean activation temperature of 86F these colors will change in many weather/seasonal conditions. These colors are outrageous and contagious! Amaze your friends and family with radical color changes, and disappearing graphics that re-appear as the temperature changes! Let your creativity turn these tools into the talk of the town. In custom painting you must: "Distinguish or be Extinguished" and these tools can help you distinguish you from your competition. Visit our website at [www.kemfx.com](http://www.kemfx.com) for more information including where to buy.*

Due to the complexities of computer, monitor, and printer selections we can not guarantee the colors you see and/or print will accurately represent the final products. In fact, we feel these photo shots don't do these colors justice! It is very difficult to capture the true brilliance of these products on a camera. Try them and you will see for yourself what everyone that has seen them in person is talking about! No guarantee of color match to this card is implied or warranted.
