Actual Powder Shown!

Fire Flake(tm) is built on a clear polymer base vacuum metalized with aluminum and then coated with weatherable clear or colored coatings to provide a durable long lasting finish that has maximum sparkle and brilliance. At 1/125th of an inch these flakes are sized to be sprayable by most conventional spray guns when mixed with clear or clear basecoat. The brilliance of FireFlake(tm) makes them well suited as an undercoat for candies such as EyeKandy(tm) or just cleared for a high level of sparkling brilliance. Depending on the intensity of the flake look you want, it would take 2-4 (1) ounce bottles of FireFlake(tm) to finish the average vehicle when combined with one gallon of IC-101.

Due to the complexities of computer, monitor, and printer selections we can not guarantee the colors you see and/or print will accurately represent the final products. In fact, we feel these photo shots don't do these colors justice! It is very difficult to capture the true brilliance of these products on a camera. Try them and you will see for yourself what everyone that has seen them in person is talking about! No guarantee of color match to this card is implied or warranted.
