

Actual photos of powder shown in the dark after only 15 minutes charge in sunlight!

GleauxFx is the latest in glow in the dark compounds that glow longer and brighter than previous glow in the dark chemistries. These powders make your graphics come to life at night! Mix with IC-101, Pearl, Flake, and Powder Binder then reduce and spray over a light base (white works best). After these charge a little you'll wow all your friends in the dark. The ultimate in ghost graphics!

Due to the complexities of computer, monitor, and printer selections we can not guarantee the colors you see and/or print will accurately represent the final products. In fact, we feel these photo shots don't do these colors justice! It is very difficult to capture the true brilliance of these products on a camera. Try them and you will see for yourself what everyone that has seen them in person is talking about! No guarantee of color match to this card is implied or warranted.
